

Ceph Multi-Cluster Management

40 responses

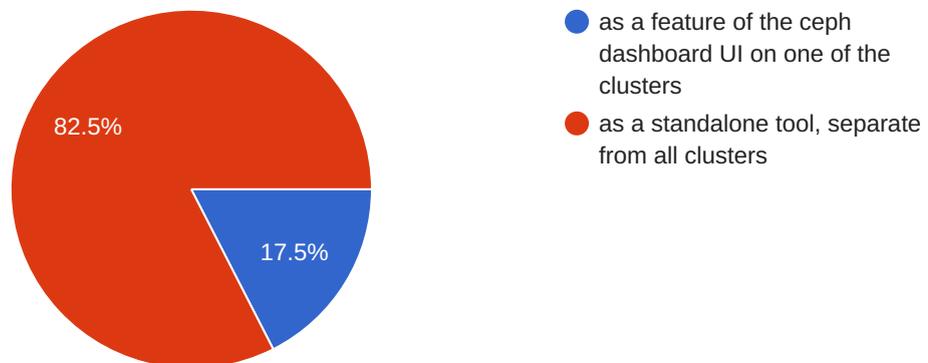

1. How many Ceph Clusters do you manage?

40 responses

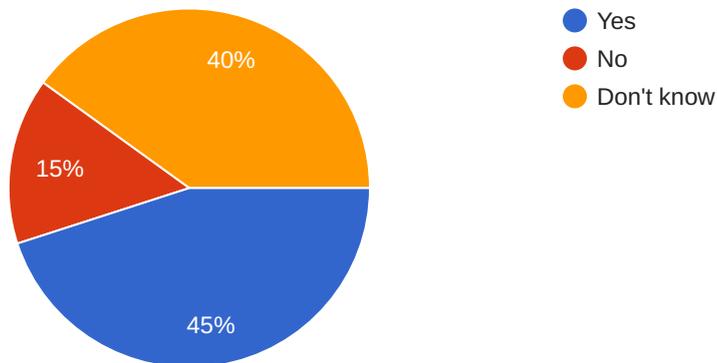

2. Where should the multi-cluster feature reside?

40 responses

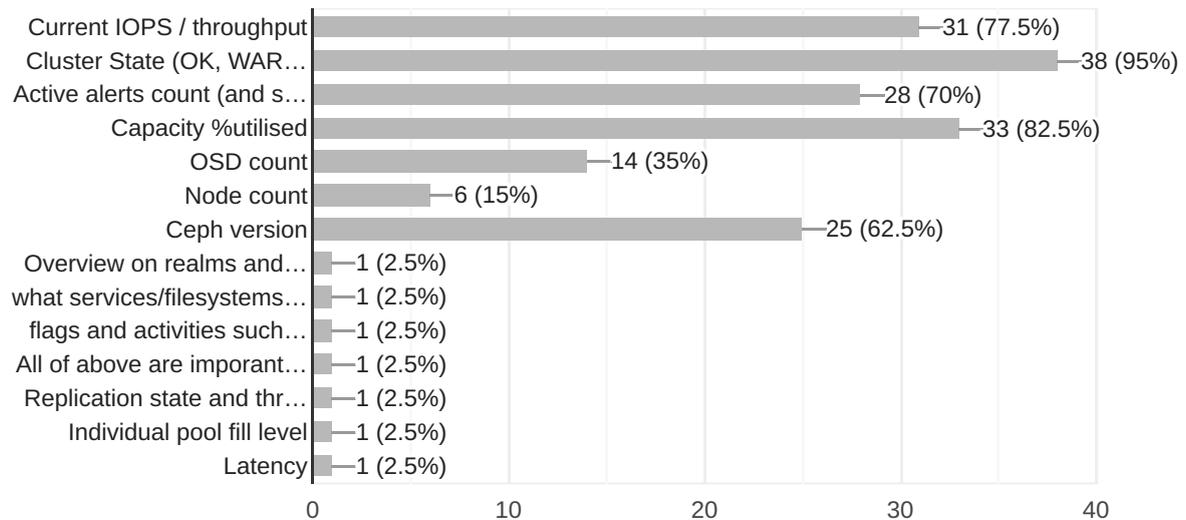

3. When managing multiple clusters, do you think having the ability to organise 'like' clusters into groups would be beneficial?

40 responses

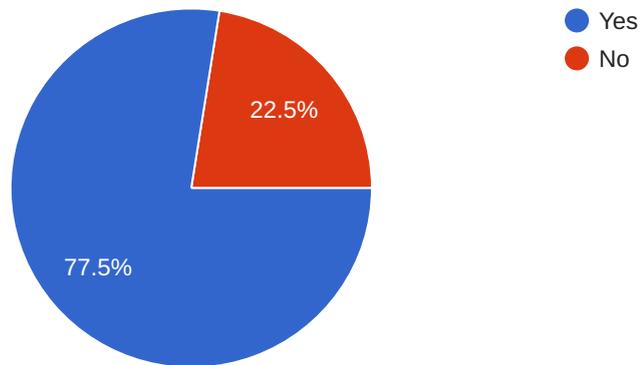

4. What kinds of attributes do you think are important when getting a high-level understanding of a Ceph cluster?

40 responses

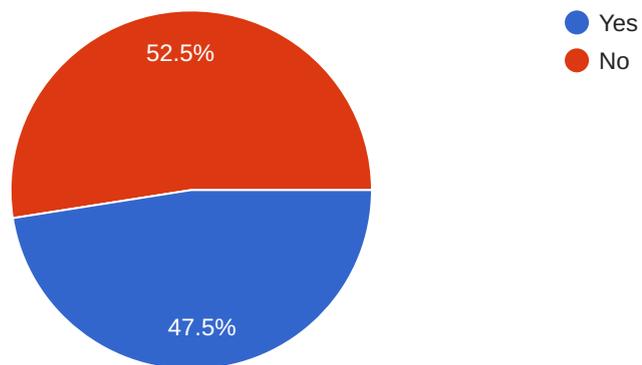

5. Would understanding the services supported by each cluster be beneficial? For example; rbd, file, object, iscsi, NFS etc

40 responses

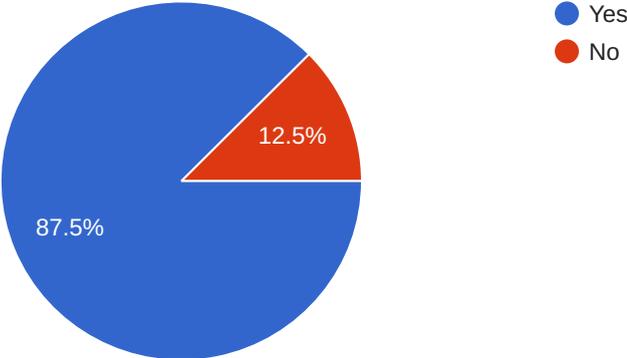

6. Should the multi-cluster interface allow you to change the configuration on any cluster directly?

40 responses

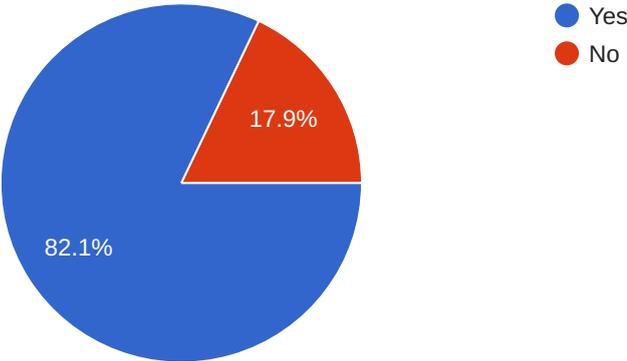

7. Should the interface provide an aggregated view of all alerts across all clusters

40 responses

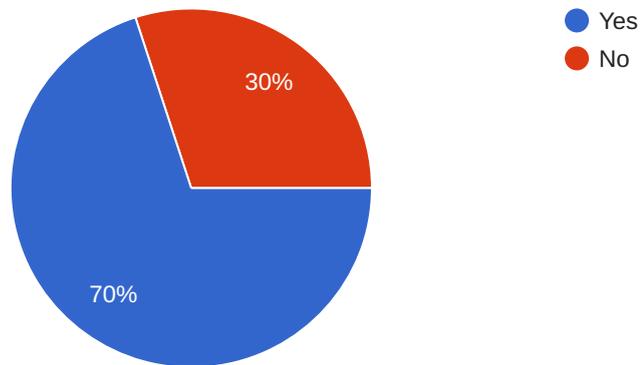

8. Should the interface provide an aggregated view of key statistics from all clusters

39 responses

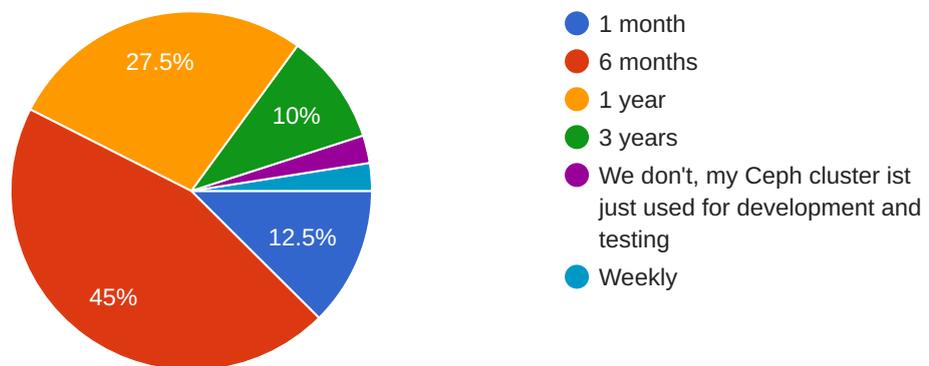

9. Should Capacity Planning be a component of the multi-cluster manager feature

40 responses

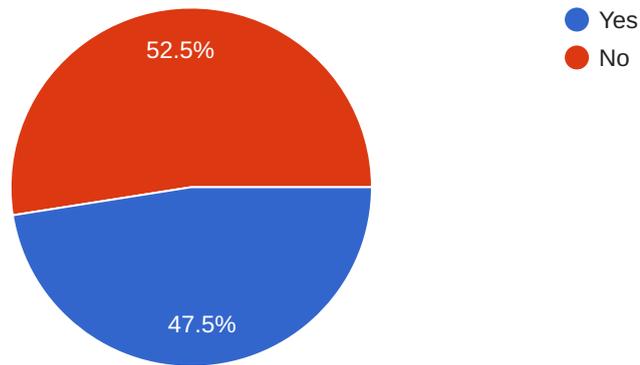

10. The accuracy of capacity planning and forecasting depends upon the size of the data model. In your organisation, what time period do you use for forecasting?

40 responses

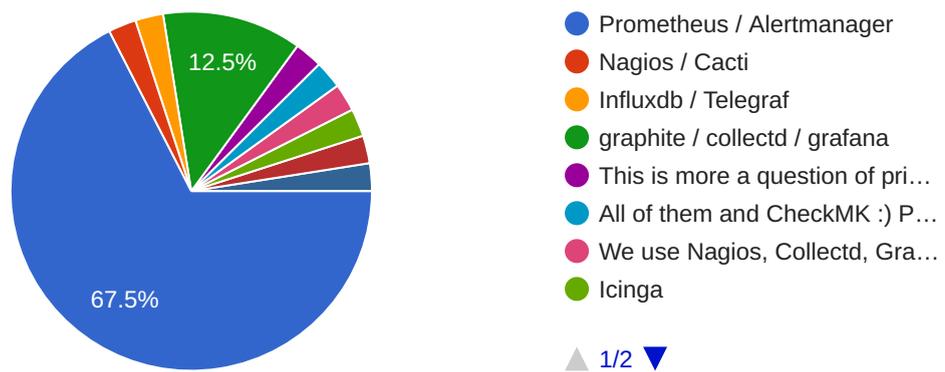

11. Do you think a multi-cluster feature requires high availability?

40 responses

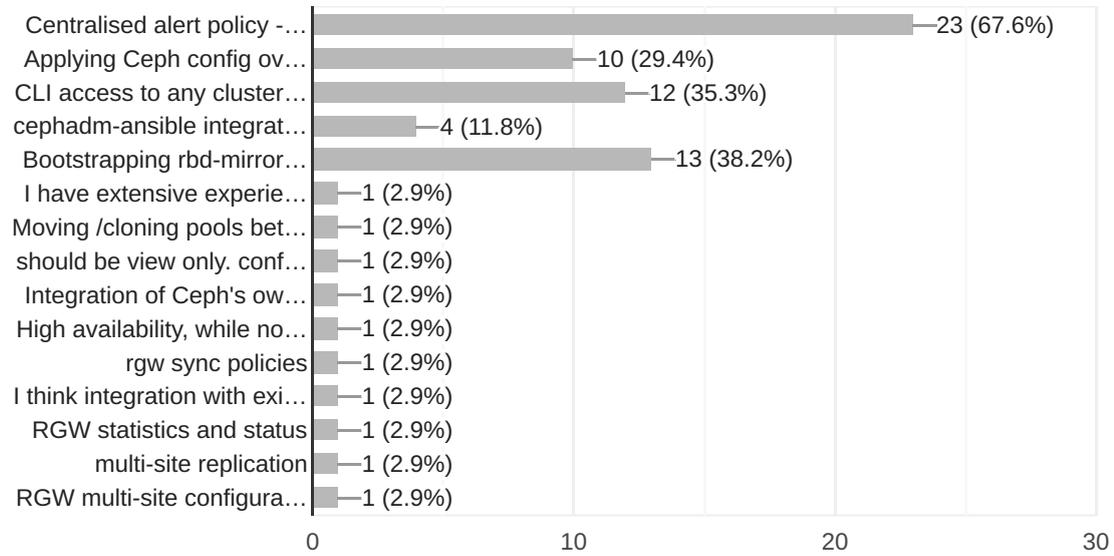

12. Assuming alert visibility across your clusters is important, what are the monitoring stacks the feature should integrate with?

40 responses

13. What other features could be considered valuable to a multi-cluster solution?

34 responses
